

COLLEGE OF ENGINEERING HONORS PROGRAM

The College of Engineering has established an honors program to challenge superior students with a more in-depth academic program and research experience and to provide a structure for working more closely with faculty members and other students in a team environment. An honors program is highly recommended for individuals planning academic or research related careers that require considerable critical and original independent thinking.

COLLEGE REQUIREMENTS

Admission requirements for the Engineering Honors Program are as follows:

- Entering freshmen must have at least a 3.5 high school GPA and at least 28 composite score on the ACT;
- Entering transfer students must have a 3.25 GPA on their transfer work.
- Students not qualifying for the Engineering Honors Program initially are eligible after one year if they earn at least a 3.25 GPA.

Students must formally apply for admission to the Engineering Honors Program. Once accepted into the program, Honors students must:

1. Take a minimum of 12 hours of Honors courses
 - A minimum of 6 of these 12 hours must be in engineering. The available engineering honors courses are found in the Departmental Requirements section below.
 - For the honors courses outside of engineering, there are many options that will count toward your engineering degree requirements. Many courses on the approved humanistic/social elective list have honors sections available. Calculus and physics honors sections also available.
2. Participate in undergraduate research and write an undergraduate thesis,
3. Fulfill any additional departmental requirements.

To retain status in the Honors Program, a student must maintain a minimum cumulative GPA (for all course work, computed at the end of the spring semester) of 3.25.

DEPARTMENTAL REQUIREMENTS

Biological Engineering

Biological Engineering offers an Honors Program for students affiliated with the Honors College. Graduation with Honors requires successful completion of the departmental Honors Program, which consists of:

1. Completion of BENG 451VH, Honors Thesis of at least 3 semester credit hours. This course offers the student an opportunity to engage in high-level undergraduate research under the direction of a faculty advisor. A written thesis is required, and a defense of this thesis will be made to a faculty committee who will determine its acceptability. Presentation of the research results at College or University-level colloquia is also required. BENG 451H will qualify as a BENG technical elective.
2. Completion of BENG 4103H and BENG 4100LH, Instrumentation in Biological Engineering. This 3 credit hours course offers the student an opportunity to engage in high-level practice of applying biological engineering instrumentation to complex, real-world problems through an honors project that is an additional requirement to the standard version of the course. Honors students will not only be required to apply the knowledge gained from this course to an open-ended project, but will also be able to required to deploy their design for field-testing using actual subjects. This additional requirement will add social, political, safety, economic and communication factors to the design.
3. Fulfillment of other Honors graduation requirements as established by the College of Engineering and the Honors College.

The following Biological Engineering courses are offered for honors credit:

BENG 4103H – Honors Instrumentation in Biological Engineering

BENG 451VH – Honors Thesis

Chemical Engineering

Chemical Engineering offers an Honors Program for students affiliated with the Honors College. Graduation with Honors requires successful completion of the departmental Honors Program, which consists of: three (3) hours of non-thesis course credit in the academic department of the student; three (3) hours of thesis course credit in the academic department of the student; six (6) hours of honors credit regardless of source; and grade point requirements.

1. Non-Thesis Course Credit in the Department: Non-thesis course credit in the department will be satisfied by Honors students by enrolling in an Honors section of one of the approved required undergraduate courses. Approval to enter the course will be granted after the Honors student has identified a project and faculty mentor for that project. By the end of the first week of class, the Honors student will seek the approval of the Department Honors Committee for the project. The project should consist of 10 to 20 hours of work on a project related to the course content; examples include: preparing and making a class presentation on a topic related to the course content; preparing example problems on course content; and doing background work on a thesis project. A written report on each project will also be required.
2. Thesis Course Credit in the Department: Thesis course credit in the department will be satisfied by Honors students in one of the following ways: completion of the AIChE Design Problem individually by contest rules as part of CHEG 4443

Design II; completion of a design contest problem as part of a team, such as the WERC competition in CHEG 4443 Design II; or completion of CHEG 4433 Honors Thesis. Honors thesis projects are performed at the direction of a faculty mentor with the approval of the Department Honors Committee. Examples of acceptable Honors projects include:

- Continuation of a project begun during non-thesis course work such as experimental work to validate a concept or model
- Continuation of a student's intern or coop experience with an employer
- Continuation of a student's REU experience at another institution

CHEG 4433 will count as a technical elective in the undergraduate curriculum requirements and will require the time commitment consistent with other 3 semester hour courses (roughly 150 hours in a semester). Regardless of the thesis project, a summary report and oral presentation will be prepared by the student. The written report must be approved by the Department Committee and the faculty mentor.

Approved Required Honors Courses for Non-thesis Course Credit

- CHEG 3143H – Heat Transport
- CHEG 3153H – Non-equilibrium Mass Transfer
- CHEG 3323H – Thermodynamics of Multi-Component Systems
